RML ANALYZER PANELS / CUSTOM PANELS / OTHER TESTS NOT LISTED / ADDITIONAL DX DIAGNOSIS CODES 9-2019

Test Name	Test Code
SARS-CoV-2 by PCR	6907557

Novel Coronavirus (SARS-CoV-2/COVID-19)

Limit testing to Tier 1 and Tier 2 patients.

TIER 1

Hospitalized patients and symptomatic health care workers.

TIER 2

People at high risk of complications who also have symptoms, including people in long-term care facilities, people ages 65 and older, people with underlying conditions and first responders.

Collection Instructions:

1. Acceptable swabs have synthetic tips (NO cotton or calcium alginate) and plastic shafts (NO wooden shafts).
2. Collect a single nasopharyngeal specimen. Oropharyngeal specimens will not be rejected, but due to decreased sensitivity, are NOT preferred. Nasal (nares specimens) are NOT advised.
3. Place swab in a transport tube containing 1-3 mL VTM, UTM, M6, M4 or sterile saline; eSwabs may also be used for collection.
4. Place tightly sealed specimen within a biohazard bag, one patient specimen per bag. Swabs in media or saline should be refrigerated until picked up.

To reduce the risk of exposure and specimen rejection due to specimen leakage, please follow the instructions below depending on the type of collection kits:

1. Break or cut the swab shaft down to the size where the swab and shaft fit inside the tube well enough that the CAP will fit securely.
2. Make sure push caps are pushed down straight and tight, wrap with parafilm if available.
3. Make sure screw caps are on straight and screwed tightly.
4. All caps should be flush with the tube.
